

A B S T R A C T

A WATCH ASSEMBLY OF THE TYPE COMPRISING A CASE PLACED ON
THE BACK OF THE HAND

5

The watch assembly comprises a case housing the
watch mechanism and the display screen, actuator means
for actuating the mechanism external to the case and
connected to the mechanism by connection means, and a
10 wristlet supporting the actuator means, the connection
means, and the case, which case is placed on the back of
the hand. The wristlet (2) comprises a flexible piece
comprising:

- a) a proximal portion (3) for surrounding the wrist;
- 15 b) a distal portion (4) for surrounding at least the
first phalanx at the base of the index finger; and
- c) an intermediate portion (5) for extending over
the back of the hand between said proximal and distal
portions (3, 4) and supporting the case (6).

20 At least one actuator means (9, 10) is mounted
laterally on the distal portion (4) of the wristlet (2)
so as to be actuatable by the thumb of the same hand.
